OBJECTIVE

Engineering Manager & Senior Backend Engineer with 7+ years of experience leading teams, designing distributed systems, and delivering mission-critical financial and blockchain platforms. Strong focus on **system architecture**, **team leadership**, **scalable backend engineering**, and **DLT/CBDC ecosystems**. Expert in **Golang**, **microservices**, **high-concurrency systems**, and secure infrastructure. A proven technical leader who drives clarity, execution, and innovation across multi-disciplinary engineering teams.

EDUCATION

Master of Artificial Intelligence, Islamic Azad University (Science & Research Branch), Tehran
2021 – 2024

B.Sc. in Computer Engineering, Semnan University
2016 – 2020

SKILLS

Programming Languages	Golang, TypeScript/NodeJS, Rust, Python, Java, Kotlin
Databases & Messaging	PostgreSQL, MongoDB, Redis, DynamoDB, Kafka, RabbitMQ, NATS, gRPC
Blockchain	Stellar, Ethereum, Hyperledger, Tokenization, Smart Contracts, PKI, DLT
DevOps & Infrastructure	Docker, Kubernetes, AWS (Cognito, S3, DynamoDB, Lambda), CI/CD
Other Skills	System Architecture, Distributed Systems, Shamir Secret Sharing, WalletConnect

EXPERIENCE

Kuknos

CTO / Engineering Manager

2024/05 – Present

- Led a multidisciplinary team of 15 engineers (backend, blockchain, DevOps, security) delivering national-scale DLT platforms.
- Owned end-to-end technical strategy, architecture governance, OKR planning, hiring, and performance management.
- Modernized legacy systems into distributed, fault-tolerant microservices, reducing operational incidents by 40%.
- Directed infrastructure reliability, production maintenance, security hardening, and system observability across platforms.
- Collaborated with banks and regulatory bodies to align CBDC and PKI-based systems with compliance requirements.

Technical Manager

2023/05 – 2024/05

- Managed blockchain and cryptographic services powering the national **CBDC (Digital Rial)** ecosystem.
- Led roadmap execution for DApps, identity services, PKI infrastructure, and distributed storage.
- Delivered cross-team coordination between engineering, design, operations, and financial institutions.

Tech Lead

2023/05 – 2024/05

- Led a team of 5 engineers developing high-performance **DLT services**.
- Architected and delivered the **Borna Blockchain**, core infrastructure for Central Bank Digital Currency.
- Ensured regulatory compliance, reliability, and scalability across all DLT and banking integrations.

Backend Developer

2021/09 – 2023/05

- Designed secure, scalable backend services for tokenized assets, identity systems, and PKI certificate management.
- Implemented **Shamir Secret Sharing** for secure cloud storage and multi-party key recovery.
- Built WalletConnect-compatible signing services and secure authentication microservices (3× faster performance).
- Developed a federated identity microservice improving system throughput by 20%.

Lendin (Canada, Remote)

Backend Team Lead

2023/05 – 2023/10

- Led backend team of 3 engineers for a **peer-to-peer lending platform** with crypto-collateral capabilities.
- Architected microservices using Golang/NodeJS, gRPC, PostgreSQL, Redis, NATS, RabbitMQ.
- Integrated AWS services including Cognito, DynamoDB, S3 for secure scalable infrastructure.
- Delivered loan lifecycle engine, risk modeling pipeline, and installment payment system.

Backend Developer (Stock Platform)

2020/10 – 2021/06

- Built real-time market data pipeline using Go, gRPC, and NATS for high-speed trade analysis.
- Created data crawlers for orderbook aggregation, enabling automated trading insights.

Android Developer (Freelancer)

2017 – 2021

- Delivered 10+ Android apps using MVVM/MVP, Firebase, ARCore, MLKit, Room DB.
- Designed end-to-end mobile architectures with clean code and scalable UI components.

PROJECTS

CBDC (Digital Rial)

Architected and delivered identity, settlement, PKI, and transaction validation layers for the Central Bank's digital currency.

GoldGate (Blockchain-based Tokenized Gold Platform)

Engineered tokenization, wallet, and Stellar-based settlement modules; implemented distributed locking and observability stack.

ZarRial (Financial Ledger System)

Designed a non-blockchain financial ledger for gold/metal trading with automated settlement, pricing, and commission handling.

Secret File Manager

Implemented secure secret storage with Shamir Secret Sharing, multi-party recovery, and encrypted distributed storage.

DEX & Wallet Ecosystem

Developed on-chain trading, WalletConnect integrations, signing modules, and crypto asset management services.
